

The Remote Simultaneous Interpreting Platform

VoiceShell: The Concept

PROBLEMS

Very often the Client already has a platform that he intends to use for Webinars

Participants may not always be able to install an application on their computer

In some cases the Client intends to use only a part of the Webinar for local users

Questions and answers must remain linked to local broadcasting (especially in the previous case)

The user finds it difficult to establish multiple connections to listen to the simultaneous translation

The number of users must be able to vary without constraints

SOLUTIONS

The System does not require the Client to use a new platform for broadcasting other than the one used

The solution must be web-based and accessible from the browser

The solution must allow you to add the function of simultaneous translation to an event configured for a wider audience.

The solution must add a chat/question function to the translation module

The solution must allow the user to follow the Webinar with only one web connection

The solution must be based on a scalable broadcast server capable of meeting every need of the Client

Why VoiceShell?

3

FLEXIBILITY

Clients can decide to use their proprietary webinar platforms or adopt well-established systems such as Zoom, Webex, On24, Gotomeeting and Brighttalk. This gives our clients full flexibility on how to incorporate simultaneous translation into their online event.

SIMPLICITY

VoiceShell connects participants to your online event via a webpage. There is no need to install an app or a third-party plugin. Accessing online meetings is fast and hassle free. VoiceShell works out of the box in any web browser and on all devices.

CUSTOMIZATION

VoiceShell webpage can be fully customised to your own needs. We offer several options for your multilingual event such as: personalised protected webpage, chats or the multi-language broadcast feed that can be embedded in your company's website.

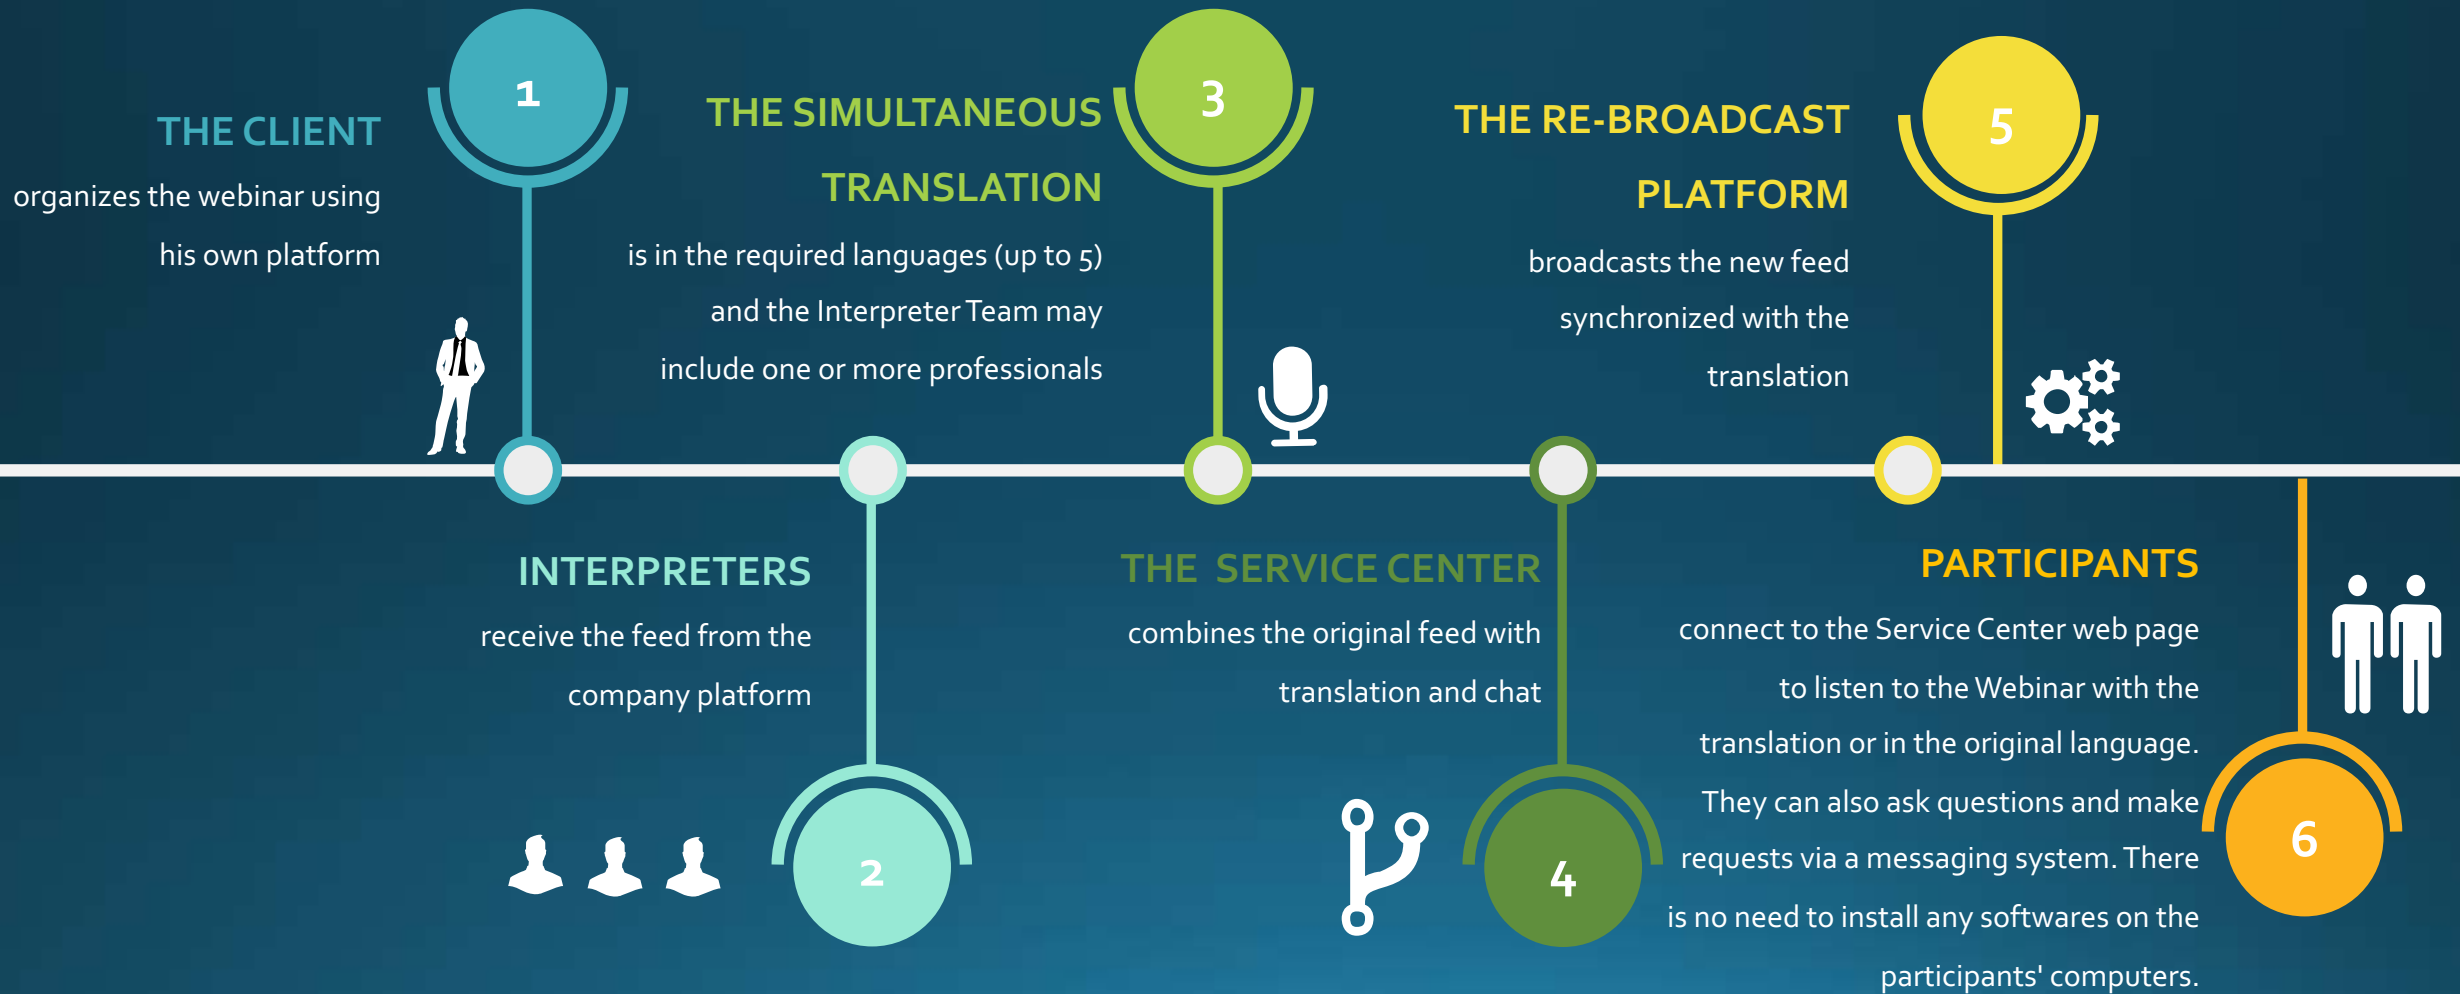

RELIABILITY

The broadcast server is fully redundant and scalable. This means that VoiceShell can support you whether you're hosting a large or small online event, a meeting or a seminar.

The Advantages

VoiceShell – The Service

Our Solutions

VoiceShell solutions give clients maximum flexibility for an optimal end-to-end solution with up to five interpreted languages.

ZoomShell

The full service that gives clients the ability to add simultaneous translation using the **Zoom**© platform.

VoiceShell

The full service that gives clients the ability to add simultaneous translation to their **own webinar** platform.

VoiceShell Audio

Adds simultaneous translation to your audio-only virtual meetings.

VoiceShell

The full service that gives clients the ability to add simultaneous translation to their **own webinar** platform.

✓ VoiceShell Basic

- Starting from your own webinar platform all participants will access your multi-lingual webinar from a VoiceShell password protected page, in up to five languages. A Q&A window is available in the language translated and all questions are available in your personalised format after the event.

✓ VoiceShell Plus

- VoiceShell Plus includes all the features of VoiceShell Basic and also broadcasts your online event from a personalised event-coded and password-protected webpage. Additionally, we provide you with a full recording with all the languages of the event.

✓ VoiceShell Embedded

- Do you want to host a VoiceShell multi-language live broadcast directly in your company's website? We provide you with a fully personalised widget code to embed our interactive streaming in your website.

ZoomShell

The full service that gives clients the ability to add simultaneous translation using the **Zoom©** platform.

✓ **Are you interested in creating an online event and you do not have a platform?**

- We will provide with a fully managed Zoom© platform that allows you to broadcast your event in up to five languages if your audience can to install Zoom©.app on their devices.
- When the webinar starts the host can start the interpretation feature which will give the interpreters access to their own audio channels. Attendees can select an audio channel to hear their language of choice. Attendees will hear the translated audio and can choose if they want to hear the original audio at a lower volume*.

✓ **What if your participants cannot install the Zoom© app?**

- We will live stream your Zoom© webinar with our VoiceShell platform in up to five languages which can be accessed via a webpage on any browser.

* *Zoom©'s cloud recordings of the interpretation session will only record the original audio of the online meeting not the translations

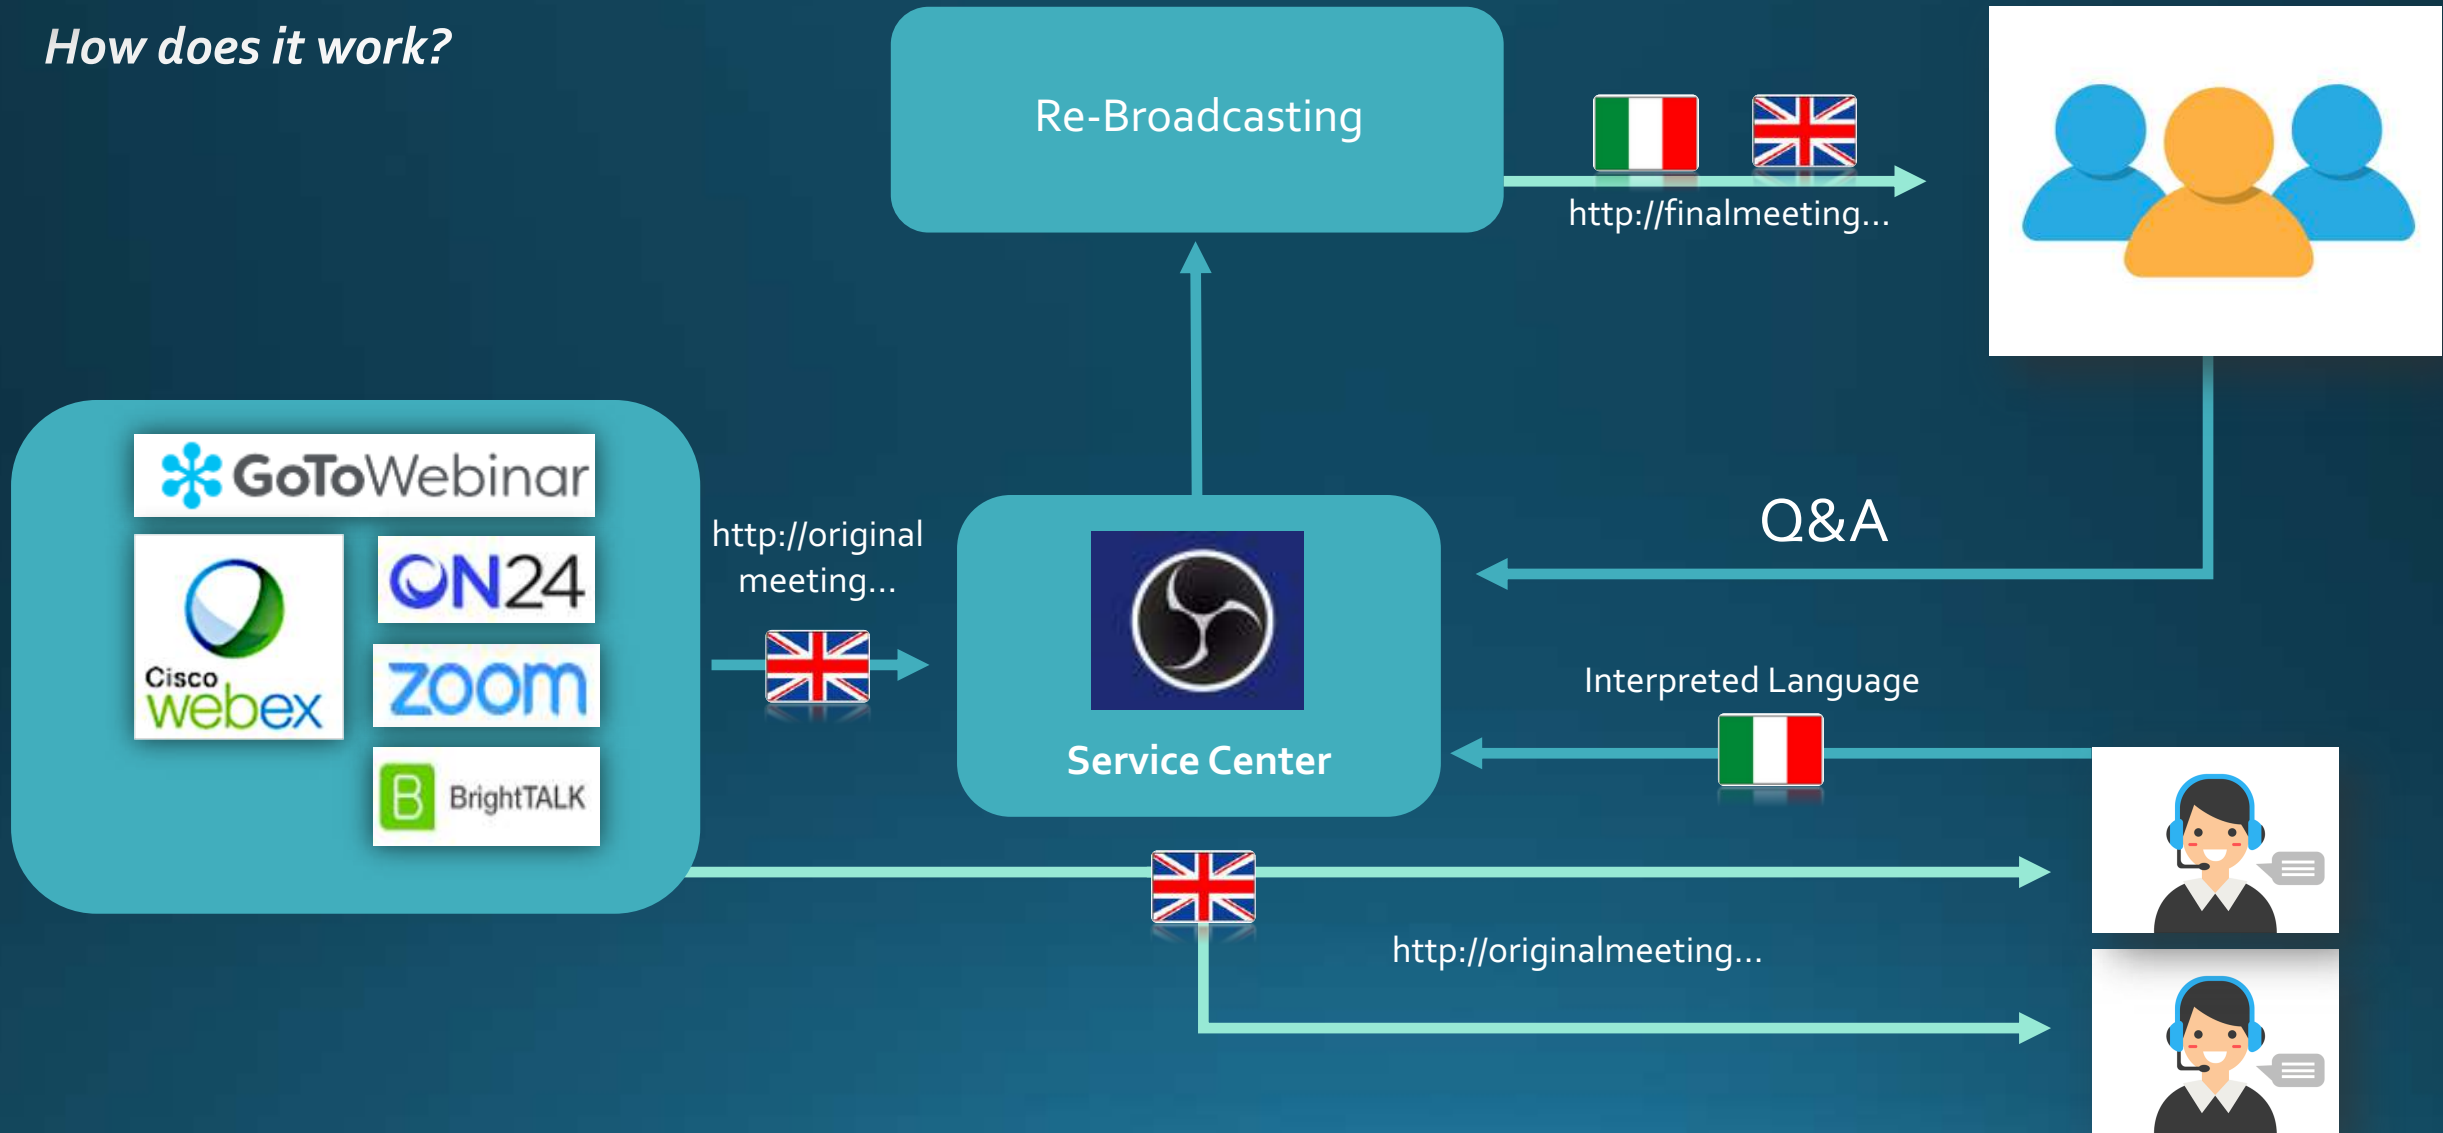

VoiceShell Audio

Adds simultaneous translation to your **audio-only virtual meetings**.

- ✓ Do you require an audio-only virtual meeting and need to provide access to your participants via phone numbers?
 - We will provide you with a multi-language fully managed virtual audio room to allow simultaneous interpreting of your meetings.
- ✓ **Do you need to add translation in post-production to your online event?**
 - We can translate your session in any of the five languages provided by VoiceShell and stream it from your personalised VoiceShell page or give you the widget code to stream it from your own website.
